

Arial[®] Wireless/Wired Remote Display

The remote display gives staff the ability to view emergency calls while going about their normal care routine. When a resident calls for help, remote displays provide programmable information on the resident's apartment number, name and/or the device type used to call for help. Messages are cleared automatically when staff members respond to a call. Remote notification options help to maximize staff efficiency and speed staff response time. Due to their high visibility they can be considered the equivalent to lights above the doors in skilled nursing facilities.

Standard Features

- ▲ Messages scroll in the order they are received
- ▲ Customizable messages for residents and guests
- ▲ 3 colors and 3 font sizes
- ▲ 10 different call display formats
- ▲ Characters can be read up to 200 feet away
