

COVID-19 QUICK DEPLOYMENT BUNDLE

Asset Management with B. Braun Integration

Challenges

Due to the recent COVID-19 outbreak, it is essential for hospitals and nursing departments to quickly locate and identify the status of critical equipment such as infusion pumps. Understanding the status of a pump (i.e. In-use or Available) allows caregivers to quickly locate ones that are ready for use and to increase the utilization of these critical assets.

Solution

STANLEY Healthcare's AeroScout® Asset Management solution is a Real Time Location System (RTLS) that automatically monitors and manages the location and status of critical equipment throughout hospitals and healthcare facilities.

By adding the powerful integration between B. Braun's DoseTrac® Infusion Management Software and STANLEY Healthcare's AeroScout RTLS platform, healthcare facilities can visualize real-time location information and pump status to ensure the assets are on-hand and available for use. This information allows caregivers and clinical engineers to understand immediately where infusion pumps can be retrieved for patient care or for maintenance, improving fleet management efficiency and utilization.

How It Works

- 1. Tag:** Wi-Fi tags are attached to mobile equipment.
- 2. Monitor:** The location and status of tagged equipment or devices is logged and monitored on your existing RTLS platform.
- 3. Find and Alert:** Tagged equipment or devices are easily located via PCs and mobile devices.
- 4. Reports:** Identify inventory levels, asset location and utilization.

An RTLS tag with a specially designed cradle is applied to B. Braun Infusomat® Space Large Volume Pumps and the Perfusor® Space Syringe Pumps. The bi-directional communication between B. Braun's DoseTrac software, B. Braun's DoseLink® Integration software, and the STANLEY Healthcare AeroScout platform provides pump location and status data—*In-Use, Standby, Not-In-Use, Power On/Off, Power Source* and more—to help locate pumps faster and improve fleet management.

COVID-19 RESPONSE OFFER

Like all offerings in STANLEY Healthcare's Hospital portfolio, our B. Braun Integration can be leveraged through the Asset Management solution available on our common RTLS platform. As a STANLEY Healthcare Asset Management customer using the RTLS platform, you also have access to this integration. To support the needs of our customers as they work to reduce the spread of COVID-19 while caring for infected patients, we have developed a special package that enables you to quickly deploy the B. Braun infusion pump Integration for locating and managing critical infusion pumps.

B. Braun Infusion Pumps with STANLEY Healthcare AeroScout® asset tags

B. Braun DoseTrac® Infusion Management Software and DoseLink® Integration Software

STANLEY Healthcare AeroScout® Real-Time Visibility Platform

Supports Interoperability

The integrated solution supports interoperability through full compliance with Integrating the Healthcare Enterprise (IHE) standard communication protocols and transactions, using PCD (Patient Care Device) integration profiles.

Smart Design Secure Tag Cradle

STANLEY Healthcare has designed tags specifically for B. Braun's Infusomat® Space Large Volume Pump and the Perfusor® Space Syringe Pump. The custom design keeps tags securely on devices during regular-use cycles and movement in/out of the SpaceStations.

Deployment

We have designed a simplified and remote implementation process that enables hospitals and healthcare facilities to quickly take advantage of this integrated infusion pump Asset Management solution. This enables you to be fully operational on an accelerated schedule.
