

HIPAA-compliant passive monitoring increases visibility into COVID-19 and beyond

FALL PREVENTION · FALL DETECTION AND MANAGEMENT · PROACTIVE HEALTH ALERTS

What Customers Are Saying

FALL PREVENTION

Foresite provides real-time fall-risk data to help reduce falls and prevent hospitalizations. The system continuously monitors the residents and alerts staff when residents become a high fall risk. This allows us to provide better care, proactively to our residents, which in turn allows them to enjoy better, longer life here at Brentwood.

—**Bobby Nero**, LNHA,
CDP – Executive Director

PROACTIVE HEALTH ALERTS

Foresite delivers daily COVID-19 alerts that improve our efficiency, helping us to prioritize our daily assessments and focus on residents that need the most care. It all comes down to our ability to proactively manage and anticipate our residents' care needs. With continuous monitoring, Foresite helps us identify and address individual risks, which exist above and beyond a COVID-19 environment.

—**Katlynn Chaplin**,
Director of Nursing

FALL DETECTION AND MANAGEMENT

If we had an unwitnessed fall or an unwitnessed event, we had to rely on the person who was injured for their account of what happened. Now we have the ability to look and see exactly what happened. That's huge. That is peace of mind.

—**Cathy Krege**, Director
of Clinical Services and
Compliance

We have been able to recognize UTIs, heart and lung related issues quickly. When you have actual data to show residents ... it changes the game.

—**ReNae Wilhite**, LPN,
Director of Wellness
